

CLOM

Cluster Level Object Manager

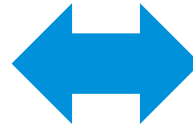

Decides which components to create and manages object placement. Connect to CMMDS for cluster setup and resource information.

CMMDS

Cluster Monitoring, Membership and Directory Services

Master: Maintains cluster. Stores cluster-wide information such as policies and node setup.

DOM

Distributed Object Manager

Instructed by CLOM to create objects. Tells LSOM to create local components. Resynchronize objects during a recovery process.

LSOM

Local Log-structured Object Manager

Write/read data to physical devices. Data staging and monitoring of physical devices.
